Tooth Growth

Overview

Explore the R datasets "ToothGrowth" data.

"ToothGrowth" captures the length of teeth in ten guinea pigs w/three dose levels of Vitamin C (0.5, 1 and 2 mg), delivered via orange juice or ascorbic acid.

library(datasets)
library(ggplot2)
data("ToothGrowth")
```

Data Dictionary

- [,1] len numeric Tooth length
- [,2] supp factor Supplement type (VC or OJ).
- [,3] dose numeric Dose in milligrams.

```
str(ToothGrowth)
## 'data.frame':
                   60 obs. of 3 variables:
## $ len : num 4.2 11.5 7.3 5.8 6.4 10 11.2 11.2 5.2 7 ...
## $ supp: Factor w/ 2 levels "OJ", "VC": 2 2 2 2 2 2 2 2 2 ...
## $ dose: num 0.5 0.5 0.5 0.5 0.5 0.5 0.5 0.5 0.5 ...
head(ToothGrowth)
##
     len supp dose
## 1 4.2
           VC 0.5
## 2 11.5
           VC 0.5
## 3 7.3
          VC 0.5
## 4 5.8
           VC 0.5
## 5 6.4
           VC 0.5
## 6 10.0
           VC 0.5
summary(ToothGrowth)
##

        len
                   supp
##
  Min. : 4.20
                   OJ:30
                          Min. :0.500
```

Initial Analysis

1st Qu.:13.07

:18.81

:33.90

Median :19.25

3rd Qu.:25.27

Mean

Max.

VC:30

Initial analysis indicates that longer tooth length correlates to higher vitamin C dosage.

1st Qu.:0.500

Median :1.000

Mean :1.167

3rd Qu.:2.000

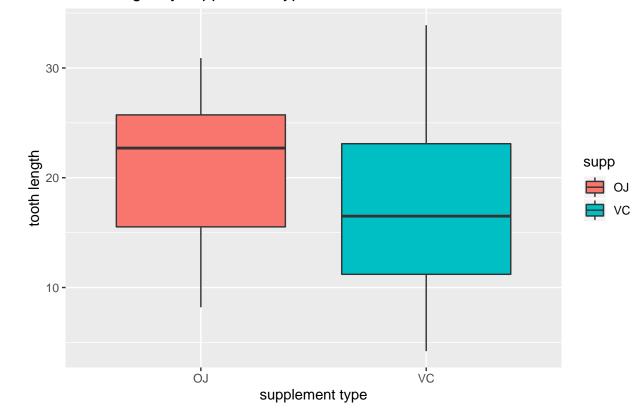

Max. :2.000

```
summaryDataFrame <- ToothGrowth %>% group_by(supp, dose) %>% summarise(count = n(), mean=mean(len), med
kable (summaryDataFrame ,digits = 3, align = 'c')
```

supp	dose	count	mean	median	standard deviation
OJ	0.5	10	13.23	12.25	4.460
OJ	1.0	10	22.70	23.45	3.911
OJ	2.0	10	26.06	25.95	2.655
VC	0.5	10	7.98	7.15	2.747
VC	1.0	10	16.77	16.50	2.515
VC	2.0	10	26.14	25.95	4.798

```
ggplot(data=ToothGrowth, aes(x=supp, y=len))+
    geom_boxplot(aes(fill=supp))+
    xlab("supplement type") +
    ylab("tooth length")+
    ggtitle("tooth length by supplement type ")
```

tooth length by supplement type

Confidence Interval Testing

Employ t test to verify null hypotheses (both supply menthods produce same results).

```
t.test(ToothGrowth$len[ToothGrowth$supp=="0J"], ToothGrowth$len[ToothGrowth$supp=="VC"], paired=FALSE,
```

```
##
## Welch Two Sample t-test
##
## data: ToothGrowth$len[ToothGrowth$supp == "OJ"] and ToothGrowth$len[ToothGrowth$supp == "VC"]
## t = 1.9153, df = 55.309, p-value = 0.06063
## alternative hypothesis: true difference in means is not equal to 0
## 95 percent confidence interval:
## -0.1710156   7.5710156
## sample estimates:
## mean of x mean of y
## 20.66333   16.96333
```

Return p-value of 0.06063 which is not large enough to reject null hypothesis. Conclusion is that tooth length not caused by supply method.

Test increasing dose from 0.5 to 1.

```
t.test(ToothGrowth$len[ToothGrowth$dose==0.5], ToothGrowth$len[ToothGrowth$dose==1], paired=FALSE, var.
```

```
##
## Two Sample t-test
##
## data: ToothGrowth$len[ToothGrowth$dose == 0.5] and ToothGrowth$len[ToothGrowth$dose == 1]
## t = -6.4766, df = 38, p-value = 1.266e-07
## alternative hypothesis: true difference in means is not equal to 0
## 95 percent confidence interval:
## -11.983748 -6.276252
## sample estimates:
## mean of x mean of y
## 10.605 19.735
```

Dramatically lower p value (1.266e-07) implies dosage impacts mean.

```
t.test(ToothGrowth$len[ToothGrowth$dose==1], ToothGrowth$len[ToothGrowth$dose==2], paired=FALSE, var.eq
```

```
##
## Two Sample t-test
##
## data: ToothGrowth$len[ToothGrowth$dose == 1] and ToothGrowth$len[ToothGrowth$dose == 2]
## t = -4.9005, df = 38, p-value = 1.811e-05
## alternative hypothesis: true difference in means is not equal to 0
## 95 percent confidence interval:
## -8.994387 -3.735613
## sample estimates:
## mean of x mean of y
## 19.735 26.100
```

Which also yields a very low p value (1.811e-05) which implies that increased vitamin C dosage encourages tooth growth.

Conclusion

Analysis using t-tests indicate that delivery methods do not impact tooth growth. Increased levels of vitamin C dosage encourages increased tooth growth.
